Cyber Security
ProData 2FA Authenticator

If your business lacks a level of security to protect your systems, consider using **ProData 2FA Authenticator** to make your services more secure

ProData 2FA Authenticator combats password fatigue, reduces fraud & helps with governance and audits.

As cybercrime gets more sophisticated, companies are finding their old security systems are no match for modern threats and attacks.

2FA is an extra layer of security used to make sure that users trying to gain access to an account are who they say they are. If a site or system that you use only requires a password to get in and doesn't offer

ProData 2FA Authenticator
Prevent data breaches involving the use of unauthorized credentials

2FA, there's a good chance that it will eventually be hacked.

It's easy for businesses to add an extra level of protection to user accounts and other in-house systems in the form of Two Factor Authentication (2FA) by using our ready built ProData 2FA Authenticator solution that can be used in standalone mode or as an integrated solution.

Benefits:

- **Stronger Security** - Having a second form of identification greatly decreases the chance of a hacker gaining access to corporate devices or other sensitive information.

- **Reduce Fraud** - By introducing Two-Factor Authentication you can help to provide an extra layer of security experience.

- **Achieve Compliance** - PCI, health, finance & government entities demand that businesses follow strict guidelines that protect consumers' rights and mitigate risk.

- **Combat Password Fatigue** - With so many passwords to remember, many consumers resort to using the same password on multiple accounts or creating simple, easy-to-steal passwords. ProData 2FA safeguards against password fatigue.

- **Simplify the Login Processes** - ProData's OTPs reduce the risk of fraud by sending users time-sensitive, unique and random codes to their mobile devices via ProData app, SMS or our dedicated mobile app.

Compliance
Addresses PCI DSS, government and general compliance.

Secure & Fast Deployment
Deploy the solution on a fast-track basis.

No Changes
The solution can be deployed without making any changes to existing infrastructure.
