Cyber Security
ProData - Outlook Email Encryption With 2FA

ProData email encryption can secure your emails & attachments so no one can see the content of your data - not hackers, not the government, not anybody

ProData not only provides true end-to-end secure encryption of emails and attachments but helps simplify compliance

ProData: Transfer of sensitive files, data and email communication increases risk of sharing sensitive information with those not authorised to access this information.

ProData End-2-End Encryption ensures total data privacy

ProData secure data transfer along with the added advantage of secure email encryption offers security by shielding sensitive data, including attachments. Our secure email software allows you to encrypt emails and attachments in transit and at rest with the added advantage of two factor authentication (2FA) for additional security.

ProData is fully integrated with Microsoft Outlook and Office 365 allowing you to share information, sensitive data, files & documents easily.

Benefits:

- Addresses data privacy & PCI DSS compliance

- Uses 2 factor authentication (2FA), providing top level data protection

- Implements fast, secure, simplified encryption processes

- Centralizes all encryption key management tasks on a single platform

- ProData E2EE eliminates man-in-the middle compromises

- Protects sensitive data according to policy with centralized, enterprise control

- Instant deployment without modification - emails can be sent and received like normal

- Protects your company's privacy

- True End-To-End Encryption prevents hackers or any other unwanted third parties from accessing your data

- Full control over who is authorised to read your data

Compliance
Addresses general as well as PCI DSS compliance.

No Changes
The solution can be deployed without making any changes to existing infrastructure.

Secure & Fast Deployment
ProData email can be deployed instantly on a PC with Microsoft Outlook using a plug & play installation.
